

We have a strategic plan for our road network. A plan that saves taxpayer resources.

The teams who manage and maintain our community's roads are leading the way in road network management. Instead of reactively responding to deteriorating pavements and failing infrastructure, we're using new tools and resources to proactively maintain and plan for the future of our community.

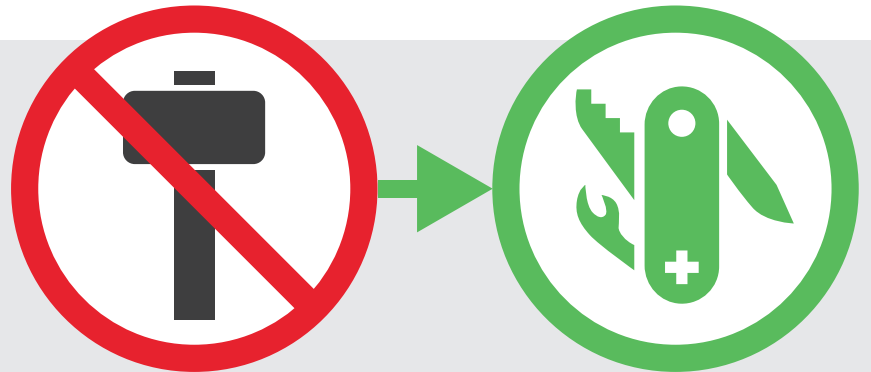

We track and monitor road condition.

With more information about our road network, we're able to make smarter spending decisions.

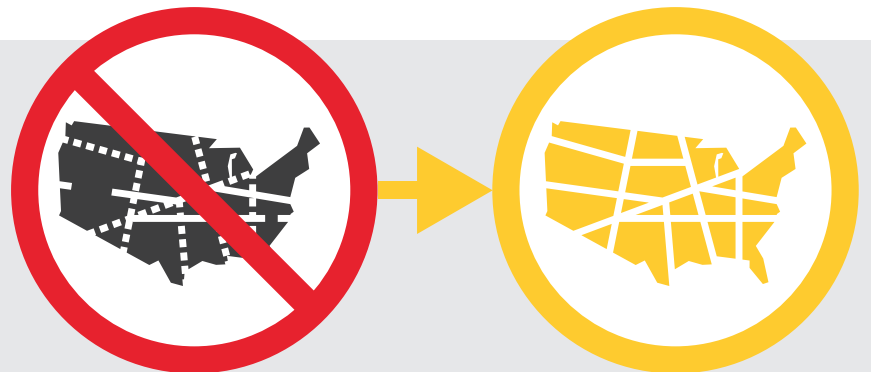

We use the right solution for each job.

By having a larger toolbox of road management techniques, we're able to apply the right treatment, on the right road, at the right time – ultimately saving taxpayer dollars.

We plan for the future.

We measure the impact of each annual plan, to ensure our community has a healthier and safer network of roads for the long run.
